Rehydrate Your Body

Discover TRIORAL!
Oral Rehydration Salts
(ORS) Packets

Perfect to take after vomiting, sweating, or experiencing diarrhea from unexpected food poisoning or a regrettable hangover. Effective hydration for patients recuperating from gastrointestinal/ bariatric surgery or other medical conditions.* Rehydrate and feel better quickly.

*If you have a specific medical/surgical condition, check with your health professional if TRIORAL ORS is right for you.

On the road, in the air, on a train, or on foot-- all travel can result in the unexpected. Be prepared. Whether you are visiting family out of state or adventure traveling abroad, fluid losses resulting in dehydration from exposure to new climates, different foods and unwelcomed viruses can occur when you least expect it.

Hiking in the mountains, camping with friends, training for sports such as cycling or marathon running are fun and exciting. But in hot, humid weather, with prolonged activity, even professional athletes can dehydrate quickly.

Outdoor labor as a job or as a hobby especially in hot, humid weather places you at risk for sudden and serious dehydration. On the construction site, in the fields, or in your own backyard, be prepared.

What exactly are TRIORAL Oral Rehydration Salts (ORS)?

TRIORAL ORS are effective, inexpensive, safe and convenient packets of pre-formulated salts/ sugar when mixed with water will rehydrate your body fast, regardless of the cause.

Each TRIORAL ORS packet is a sealed, pre-measured and pre-formulated powder that contains: Glucose anhydrous 13.5g, Trisodium Citrate Dehydrate 2.9g, Sodium Chloride 2.6g and Potassium Chloride 1.5g.

How does TRIORAL ORS work and why are these electrolytes important?

This combination of electrolytes with glucose

optimizes efficient absorption via the intestinal tract. With TRIORAL ORS both the active transport of glucose and diffusion of salts/water through the intestinal lining are at work-- so you rehydrate fast.

Dehydration may occur unexpectedly and rapidly as a result of excessive fluid loss due to sweating, urination, fever, etc. When the body is depleted of critical salts and water, severe dehydration many ensue, resulting in acute medical emergencies.

How should I take the TRIORAL ORS packets?

Empty completely one TRIORAL ORS packet into one liter of water. Only open the sealed packet when you are ready to mix with water and drink it. Since it contains NO artificial sweeteners or flavoring agents, at your discretion, you can squeeze a lemon, lime or orange to taste.
