Natural Foods Market

Stiffness, swelling and pain in a pet with arthritis is no different than what we as humans experience. As our pets age, we know how important it is to feed them a good diet with human-grade ingredients, but we don't always know how to treat their common chronic conditions such as osteoarthritis, skin allergies and digestive problems. If your pet is suffering, you'll want to know about **Yucca Intensive**, a standardized extract of yucca, which contains over 85% bio-available steroidal saponins. Nature's most powerful anti-inflammatory agents, saponins provide relief similar to steroidal meds without their adverse side effects. Shown to reduce soft tissue swelling and digestive distress, **Yucca Intensive** can be used topically, as well, to mitigate the "itch" of skin allergies, relieve hot spots and speed the healing of wounds. Many dogs have sent their owners in for refills! As always, we guarantee your satisfaction.
