

Do you have diabetes, chronic fatigue, circulatory problems, poor digestion, heartburn, mental stress, muscle weakness, or skin rashes?

Dennis Clement from **Health in Focus** will be doing **live cell blood analysis and nutritional counseling**. Dennis is in the store every 6 - 8 weeks and has helped many of us with digestive and other issues. Next available appointments will be around October 1. We will have an exact date soon.

Dennis now combines the live cell culture test with the DPA (digital pulsewave) for \$75 total cost. He also has a new test called Heart Rate Variability. Only \$115 for all three tests!

The blood test checks for protein digestion, uric acid crystals, cholesterol plaque, sugar plaque, Vit B12 deficiency, hormonal imbalance, iron deficiency, free radical damage, dehydration, colon toxins, liver toxins, lung toxins, parasites, rod from bacteria, L form bacteria, fungus, yeast, liver stress, white blood cells, lymph system, heavy metals, glucose level, and ph level. The new test will show how stressed your adrenals are and what you can do to help your body handle stress better.

Next available appointments will be announced soon.
